

ΕΦΗΜΕΡΙΣ:

OR, A

DIARY

{ ASTRONOMICAL
AND

{ ASTROLOGICAL }

For the year of Grace 1665.

It being the First after the
Bissextile, or Leap-year.

CONTAINING

1. The Motions and Aspects of the Planets, Eclipses of the Luminaries, Full Sea, Tides and their Returns, Monthly Observations, Weather, &c.
2. A General Judgement on the Year from the Suns Ingreis into the Vernal Equinox.
3. A Short Discourse of the holy Feast of *Easter*: With other things of necessary Use and Consequence.

BY
JOHN GADSBURY,

ἡλιαστροφικὸς.

Non multa, sed multum.

LONDON:

Printed by *T. Cotes*, for the Company of Stationers.

AN ADVERTISEMENT

Concerning a late Abuse cast upon the Author.

THere is one, (whose Name and Character I shall spare, they being too well known unto many both in London and elsewhere) that hath lately in Print been pleased to cast some Aspersions upon me; whom I look upon as no other then the Hireling or Instrument of my old Enemy W.L., a man I shall scarce so much as name hereafter, (unless again insolently provoked by him) being somewhat sorry that formerly I thought there needed any thing more, then his own Writings and Actions, to declare him to the world both infamous, ignorant, and envious. And for this forward back-friend of mine, that hath as falsely as reasonlessly attempted to make a breach upon my reputation, and would be thought capable of Correcting the Verb, before he truly understand the Noun; As I esteem him no way deserving my good word, I shall scorn to expend an ill one upon him.

*Irrita vaniloquæ quid curas specula lingua,
Latrantem curatne alta Diana canem?*

I am so far from attending or minding Controversies, at the present, that all my leisure to me, I finde too little, to employ about my intended BODY of ASTROLOGIE; in which I have made a considerable Progress: but the Work being great, it will not, cannot see the light suddenly.

The Authors Request, unto such as salute him by Letters.

I Shall desire all such as send Letters unto me about business concerning themselves, that they would convey them by the hand of some friend in London, who may likewise call upon me for an Answer: for although I am very willing to gratifie each persons request, that is a lover of Art; yet my want of time prevents me of waiting upon the Post, or Carriers, to serve them. By reason whereof, many that have sent unto me, have failed of their expectations. Of this I thought fit to give Notice, that none (for the future) may be disappointed.

To the serious Students in Astrologie,

Gentlemen!

IN my last years Ephemeris I endeavoured to persuade with you, and gave you some encouragement to be curious in your collecting of all childrens Nativities (Males especially) that were born in the years 1657 and 1658, and of such as should be born on September the 4 and 5 days last year. And some of you I have found so industrious therein, that you have not onely approved your selves friends unto the Truths of *U R A N I A*, but so respective unto me, as to communicate your Observations: And I hope there is none of you have reason to say that I have dealt below the line of my promise with you, but have freely (as I have been requested) not onely compared, but exchanged Notes. And unto the true *Amicus*, or Lover of Art, shall yet be willing to hold and continue the same correspondence.

And to the end that Astrologie may not want the support that my mean capacity is able to afford it, either at the present or in future, I have resolved with my self to keep a Register of all Nativities that come unto my hands: And when it shall please the God of knowledge to translate me from my Studies here, I shall commit such my Collections (with my Observations thereon) to some one, that I shall finde most able in, and deserving of such matters; with an Injunction for the permitting all industrious Students the perusal thereof, or to take Notes therefrom, as they shall be required to good ends.

And if any person or persons, of parts capable (for *Astrologus* (as well as *Poea*) *nascitur, non fit*) shall, in this great and populous City of London, or in any other place whatsoever, undertake the same, I shall be so far from being angry therat, that I shall rather be transported with rejoycing, that my project here propounded may meet with such friends, as will use their skill and industry to promote it; for the bringing to perfection so excellent and useful a Science as is Astrologie.

In this designe, my friend I be advised to set self-interest, partiality, and flattery apart; despise not the meanest persons Nativity, neither be proud of the greatest: but take all, and be exact, punctual, and faithful, in thy Observations: Thereby thou wilt bring such honour to thy self and Science, as is wished by

Thine and Astrologies Verary,

A 2

John Gadbury.

The ROYAL TABLE.

Kings have their various Fates, as meaner men;
 Encounter Gloomy, well as Glorious years:
 The Cross accompanies their D I A D E M,
 To shew their Joys are (often) mix'd with Fears.
 Considering the Cares a Crown doth bring,
 'Tis Piety to pray,
 GOD SAVE THE KING.

A Table of Terms for the year 1665.

Return Days, or Days of Essoyn.	Dayes of Exception.	Returna Brevium.	Days of Ap-pearance.
---------------------------------	---------------------	------------------	----------------------

Hilary-Term begins January 3. ends February 12.

Octab. Hill. Jan. 21	January 21	January 23	January 23
Quind. Hill. Jan. 28	January 28	January 28	January 31
Craft. Purif. Feb. 3	February 3	February 3	February 4
Octab Purif. Feb. 10	February 10	Februa. 11	February 13

Easter-Term begins April 12. ends May 8.

Quind. Pasc. April 10	April 11	April 11	April 12
Tres Pasc. April 17	April 18	April 19	April 19
Mens. Pasc. April 24	April 24	April 26	April 27
Quinq. Pasc. May 2	May 2	May 3	May 4
Craft Ascen. May 5	May 5	May 6	May 8

Trinity-Term begins May 26. ends June 14.

Craft. Trin. May 22	May 23	May 24	May 26
Octab. Trin. May 29	May 30	May 31	June 1
Quind. Trin. June 5	June 6	June 7	June 8
Tres Trin. June 12	June 13	June 13	June 14

Michaelmas-Term begins October 23. ends November 23.

Tres Mich. Octob. 20	Octob. 21	Octob. 21	October 23
Mens Mich. Octob. 27	Octob. 27	Octob. 30	October 31
Craft. Anim. Nov. 3	Novemb. 4	Novemb. 6	November 7
Craft. Mart. Nov. 10	Novem. 13	Novem. 14	November 14
Octab Mart Nov. 16	Novem. 20	Novem. 21	November 23
Quind. Mart. Nov. 23	Novem. 27	Novem. 27	November 28

Litigiousness is bow'd unto by all;
 She's grown a Goddess Epidemical!
 And all her Nets of Envie casts about,
 T'engage the Sober, well as Rabble-rout,
 Unto her Sport and Game: That but for Law,
 Men (like wilde Brutes) could not be kept in Awe.

PAX EST DELICISSIMA REUM.

Great Europe's glory with the Springing year,
(In all respects) doth happily revive :
Her Patriots Black terror need not fear ;
Her wasted Countries (now) afresh do thrive.
Her publick Pagan-enemies abate ;
Her private Rebels less infect each State.

February hath xxxviii days.

Oh! for a Rosic-Crucian now, to tell

What *Mars* and *Hermes* in the *Fishes* do ;

A Shipton, or a Merlin, could they well

Unfold the Meaning! I'd turn----- too.

But since these cannot, let's invoke the Stars,

Who vote, They portend pious Fruits and Joys.

March hath xxxi days.

To high windes, words and actions, March gives date,
And threatens dangers to some Northern State:
Some play a Comets part, and blaze a while;
And (when their Matter's extinct) become vile.
Poor England now, would have a trembling heart,
But that the * God of Battels takes her part. * ♂ in ♀.

April hath xxx days

The highest of the seven planet stars,
Is Stationary, in a Tropique Signe:
If Holland, and her Neighbour, smart by wars,
Let them look to't; the danger's none of mine.
If England keep but from a Sickness free,
Then England will a happie Kingdome be.

May hath xxxi days.

Scout Mars, grim Chironus Trines, who crossly darts
His Leaden Arrows at kinde Females hearts :
He frowns on Stilbon too, (as Mars on Jove)
Whence issues Fatal (sometimes, wanton) Love.
Leud tongues beget loud Scandals ! Women now,
Mifcarry oftner, then th^e were wont to do.

Fair *Ericina* here turns Retrograde,
The second day : to bear her company,
In this her Crab-like motion, *Stilbon's* made ;
And *Mars* (mean time) possesseth *Gemini*.
Great Ladies lose their honour ! London now,
Some petit discontents begins to know.

July hath xxxix days.

Six Oppositions of th' Erratick Stars;

And two Eclipses in this month you'll find:

The Great Turk's worsted in his present wars,

His body to the Grave (perhaps) design'd.

Poor Christians, suffer great Calamities,

From Turks among themselves; They are so wise!

August hath xxxi days.

After the last Months fiery actions, here
Some sober Treaties are a drawing neer:
Fair promises are made on every hand,
Yet few believed, as affairs do stand:
Grave Chronus turns the Scale: the offers made,
From his confirming hand, acquire most aid.

October hath xxxi days.

October makes the sturdy trees to yeeld
 Their graceful leaves unto their Mother Earth;
 Forceth the Northern Armies to leave the Field;
 Until the Spring their courage gives new birth.
 This commonly it doth: but part on't now,
 Like friendly August (very neer) will show.

PROVENANT RILA. XXX d. 77.

Great Leagues, and Friendships, in rich Europes land ;
Ambassadors, and Agents, frequent are ;
The Losliest discords, (now) are at a stand :
God grant their end (like their beginning) saire !
When war abates, and Peace once Regent growne,
Then Court, and Countrey, Clergie, keep their owne.

December hath xxxi days

Thus Have I brought the Head o' th' Snake to th' Tayl;
From the Beginning, I am come to th' End:
Heaven's the Chart by which my Muse doth sayl;
Divine Urania is my Guide, my Friend!
From her I have deriv'd these short Essays;
Be She but pleas'd: I scorn all meaner Praise.

A short Discourse touching EASTER.

THe Reverend Dr. Spark (in his *Primitive devotion*) very aptly terms *Easter*, *The King of days, and Queen of feasts*. It being indeed, the root, and original Feast, from whence all other Moveable Feasts spring. The word *Easter* (saith this learned person) is a compellation made up of a German and an English term, viz. *Oest* and *Star*; the former of which, the Saxons brought in among us, namely *Oest*, signifying the East, or arising: and *Star* we know imports a Luminary of heaven; the chief whereof at this time of the year, are in their Culminations; and both therefore most emphatically suited to Christ and his Arise (or Resurrection) whose name is the *East*, Zech. 1. 12.

Mr. Blunt tells us, *Easter* is so named of *Eoster* a Goddess of the old Saxons; whose Feast they kept in *April*. *Verslegan* saith the same; and that at this present, in *Saxony* it is called *Ostern*, which comes of *Oster=monat*, their and our old name of *April*, in which month this great Festival mostly happens: howbeit, we know it often falls in *March*, which is called the first month, or *Abib*, because of the Vernal Equinox happening therein; the Sun then beginning his race afresh, there saluting the first point of the Zodiac. Hence also it is, that our Church begins the year in this month, that the Actions and Observations of men on earth, harmonically might answer the Motions of the heavens. Formerly also Kings Reigns were accounted to have their beginnings in this month: whence one Poetically writes,

Of Months and of New fruits is Abib father;

Kings Reigns were reckon'd thence, and Feasts together.

Thus far of the Name; now to the Thing. Of this eminent and sacred Feast, we shall finde three several kinds. 1. *Pascha Judeorum*, or the Jewish Easter. 2. *Pascha verum*, or the Easter we observe. 3. *Pascha novum*, or the Gregorian or *Romane* Easter.

The Jews Easter is called the *Passover*, from the Hebrew word *Pasach* (as some think) signifying to leap, or to pass over, or beyond; and was instituted *a.m.* 2447, and celebrated from the 15 day of the first month called *Abib*, to the 21 of the same, inclusive; i. e. for seven days together; yet so, as the 15 and 21 were held more sacred then the rest. These seven days were also called the Feast of *Azymes*, (viz. a time in which it was not lawful to eat leavened bread) and the first of them was called the *Pasche*, or *Easter*, *נחל יקח*, because on it the Paschal Lamb was eaten.

The *Pascha verum*, or the Easter which we observe, was ordained 322 years post Christ. For *Constantinus magnus* noting divers errors

A short Discourse touching EASTER.

errours and conentions among the Christians after the Apostles time, about the celebration of Easter, assembled from all nations 318 Bishops, and other learned persons, as well Greeks, as Latines, and Egyptians; such as could withal well determine of the motions of the celestial bodies, and were thorowly versed in Astronomy; among whom, *Eusebius* Bishop of *Cæsarea* was chief, being an excellent Mathematician: and this learned Bishop kept them there two years at his proper cost and charge. So that anno Dom. 323, they instituted a new *Golden Number*, differing from that of the *Romans*. By this new Circle, this holy Feast should be celebrated not precisely at the first Full Moon of the first month, but, as one observes, *statim post*, presently after, viz. on the next Sunday following the first Full Moon after the Vernal Equinox, which then happened at or upon the 21 of March.

And here, by the way, let me acquaint you, that the Almanack-makers of this Nation were not mistaken the last year, in fixing Easter-Sunday on April 10. Neither did they therein differ, either from the Council of Nice, or the Rubrick of the Church; as a learned Divine, in a discourse writ upon that occasion, intitled *Easter not mis-timed*, hath most appositely observed. And because that discourse may not come unto the hands of every one, I shall presume to borrow a few words therefrom.

The Rubrick of the Church, with which our Almanacks, and the general Table of finding Easter for ever, agrees, says, That Easter-day is the first Sunday after the first Full Moon which happens next after the 21 of March. The Full Moon following March 21 last year, happened on March 31, being Thursday; and the Sunday following was April 2. Therefore by this Rule, say the Objectors, Easter-day should have been, not on April 10 but April 3. This were a sufficient demonstration, if the words [Full Moon] had the same meaning in both places: but the [Full Moon] meant in the Rule this year (speaking of 1664) is no other then the 4 of April; which being Moonday, the first Sunday after it must needs be April 10. which therefore, by this Rule, shall be Easter. If it be made a difficulty to admit such Full Moons, search the Mass-book which was printed by Kingston and Sutton, in 40, at London 1555, which was the second year of Q. Mary. The title of the book is, *Missale ad usum ecclesie Sarisburiensis*. It contains no such Table of Moveable feasts readily calculated, as our Liturgies are wont to have; but in stead of it, there are Rules for finding the Dominical letters, the Leap-years, the

A short Discourse touching E A S T E R.

Moveable feasts, the New Moons, and Easter. Easter-day is there found by New or Full Moon, with these directions.

Carmina docentur per Nouilunia invenire Pascha.

Post regum sistat, quare Nouilunia trina

Post Dominica tercia, Pascha sacrum celebra.

Aliud. Post Veris Equinoctium quare plenilunium:

Et Dominica proxima sacrum celebra Pascha

Non verius invenies, si mille legas Codices.

The New Moon meant in those Verses, is not such as our Almanacks now profess to give us, namely, the ho. and min. of the true conjunction of the Sun and Moon: but it is only the day of the Moons mean conjunction, as it was above 1300 years ago; and is there found, meerly by taking the day against which the proposed years Golden Number stands in the margin of each month. Thus far this learned Author.

But to return to the Nicene Council, where I brake off. This institution continued not above 7 years after that great Assembly had appointed it: for anno 330 there arose many differences between the Greeks and Romans about this account; which continued near 200 years: and then, in the reign of Justinian, anno 527, one Dionysius Abbas, a noble Roman (as saith mine Author) began to frame Tables of Easter, according to the minde and intent of the former Council, which he compleated an. 532. And then, by the general Council of Chalcedon, it was enacted, That whosoever held any other Easter then that which the Statutes of Rome appointed to be observed; should be reputed and proceeded against as an heretick. And therefore unto the year 1582, (which was above 1000 years) no man durst presume to alter this Easter; although they apparently saw the Equinox slide backward, viz. from March 24. to March 11. (nay, now it is sometimes on March 9 or 10.) by reason whereof, it many times happens, that we have two Full Moons (I mean such onely as our Almanacks give, viz. two oppositions of the Sun & Moon) after the Vernal Equinox, before we can celebrate our Easter. Hence also it emergeth, that we have two Easters in less then an Astronomical year, viz. 365 days. As to instance, from April 10. which was Easter-day last year, to March 26. on which it falls this, you will find but 350 days. Hence likewise it is, that there is sometimes a month or five weeks difference between ours and the Roman Easter; as by revolving your Ephemerides of past years, may easily be found.

Now, in the year 1582, Pope Greg. 13. hoping so to correct the Kalen-

A short Discourse touching E A S T E R.

Kalendar, as that the Equinox should not be subject to so great anticipation, &c. makes an alteration therein, and forms Pascha novum, or the new Easter; and the Romans (with some others) in obedience to his Bull, do follow the same, as the most exact. And this he doth, by subtracting 10 days from Octob. 4 to 15. inclusive: which was (beyond question) a fair step to the discovery of the truth in this matter: for should the former account continue in use among us (as some of our Masters in Astronomy well observe) in process of time, our Saviour and S. John Baptist must needs exchange their Tropiques; and the Feast of Christs Nativity will fall in June, when the Sun possesseth Cancer; and that of S. Jo. Bapt. in December, when the Sun enters Capricorn.

But now, to avoid all inconveniences that we at present embrace, and that by our cherishing are like to increase (if we still strictly follow either the Nicene Council, or that of Chalcedon, or the alteration made by Greg. 13.) if (as a good Astronomer of this nation some three or four years since observed) all Bissextiles were omitted for 52 years, that alone would gradually and insensibly, without the least inconvenience, bring us two days before the Gregorian account, and be agreeable to the Suns place at Christs birth; whereas the Roman account (though now the best) would be two days less exact; that being only reduced to the Council of Nice. And if after that, the Bissextile be kept as before (except in every 132 years, wherein one Leap-day must be exempted for ever) or else, that one Leap-day be struck off every 100 years (except in each 400 years) for ever; there would need be no more, so have our Christian Festivals kept according to primitive observation: for by supposing the Tropical year to be (after Bullialdus) 365 d. 5 h. 49 m. 4 s. 21 th. the annual redundancy allowed in by Cesar, will be 10 m. 55 sec. 39 th. which compleateth one day in 132 years; and but 2 m. 25 sec. 48 th. over; and three days in 400 years, with 5 m. over: which makes but one day in 11294 years, a matter very small & inconsiderable.

More of this might have bin said; but my room being small, and appointed for other matter, enforceth me to an omission. A further account hereof the Reader may therefore expect, either in a discourse by it self, (wherein I intend an Explanation of the Kalendar at large, and to shew the original and use of all the Fast & Feasts therein contained) or else in my Body of Astrologie, in which work I have already made a considerable progress. In the

A brief Judgement of the Year 1665.

the interim, I refer them for further satisfaction, to a learned Discourse, intitled *Tractatus Paschalis*, lately published by my ingenious friend Mr. J. Booker; and so come to Astrological judgments.

A brief Judgement of the Year, from the Sun's entering the Vernal Equinox.

The Vernal Ingress is this year on March 9. 12 h. 14 m. P. M. as by the ensuing Calculation from my Tables in my *Doctrine of Nativities*, is demonstrated.

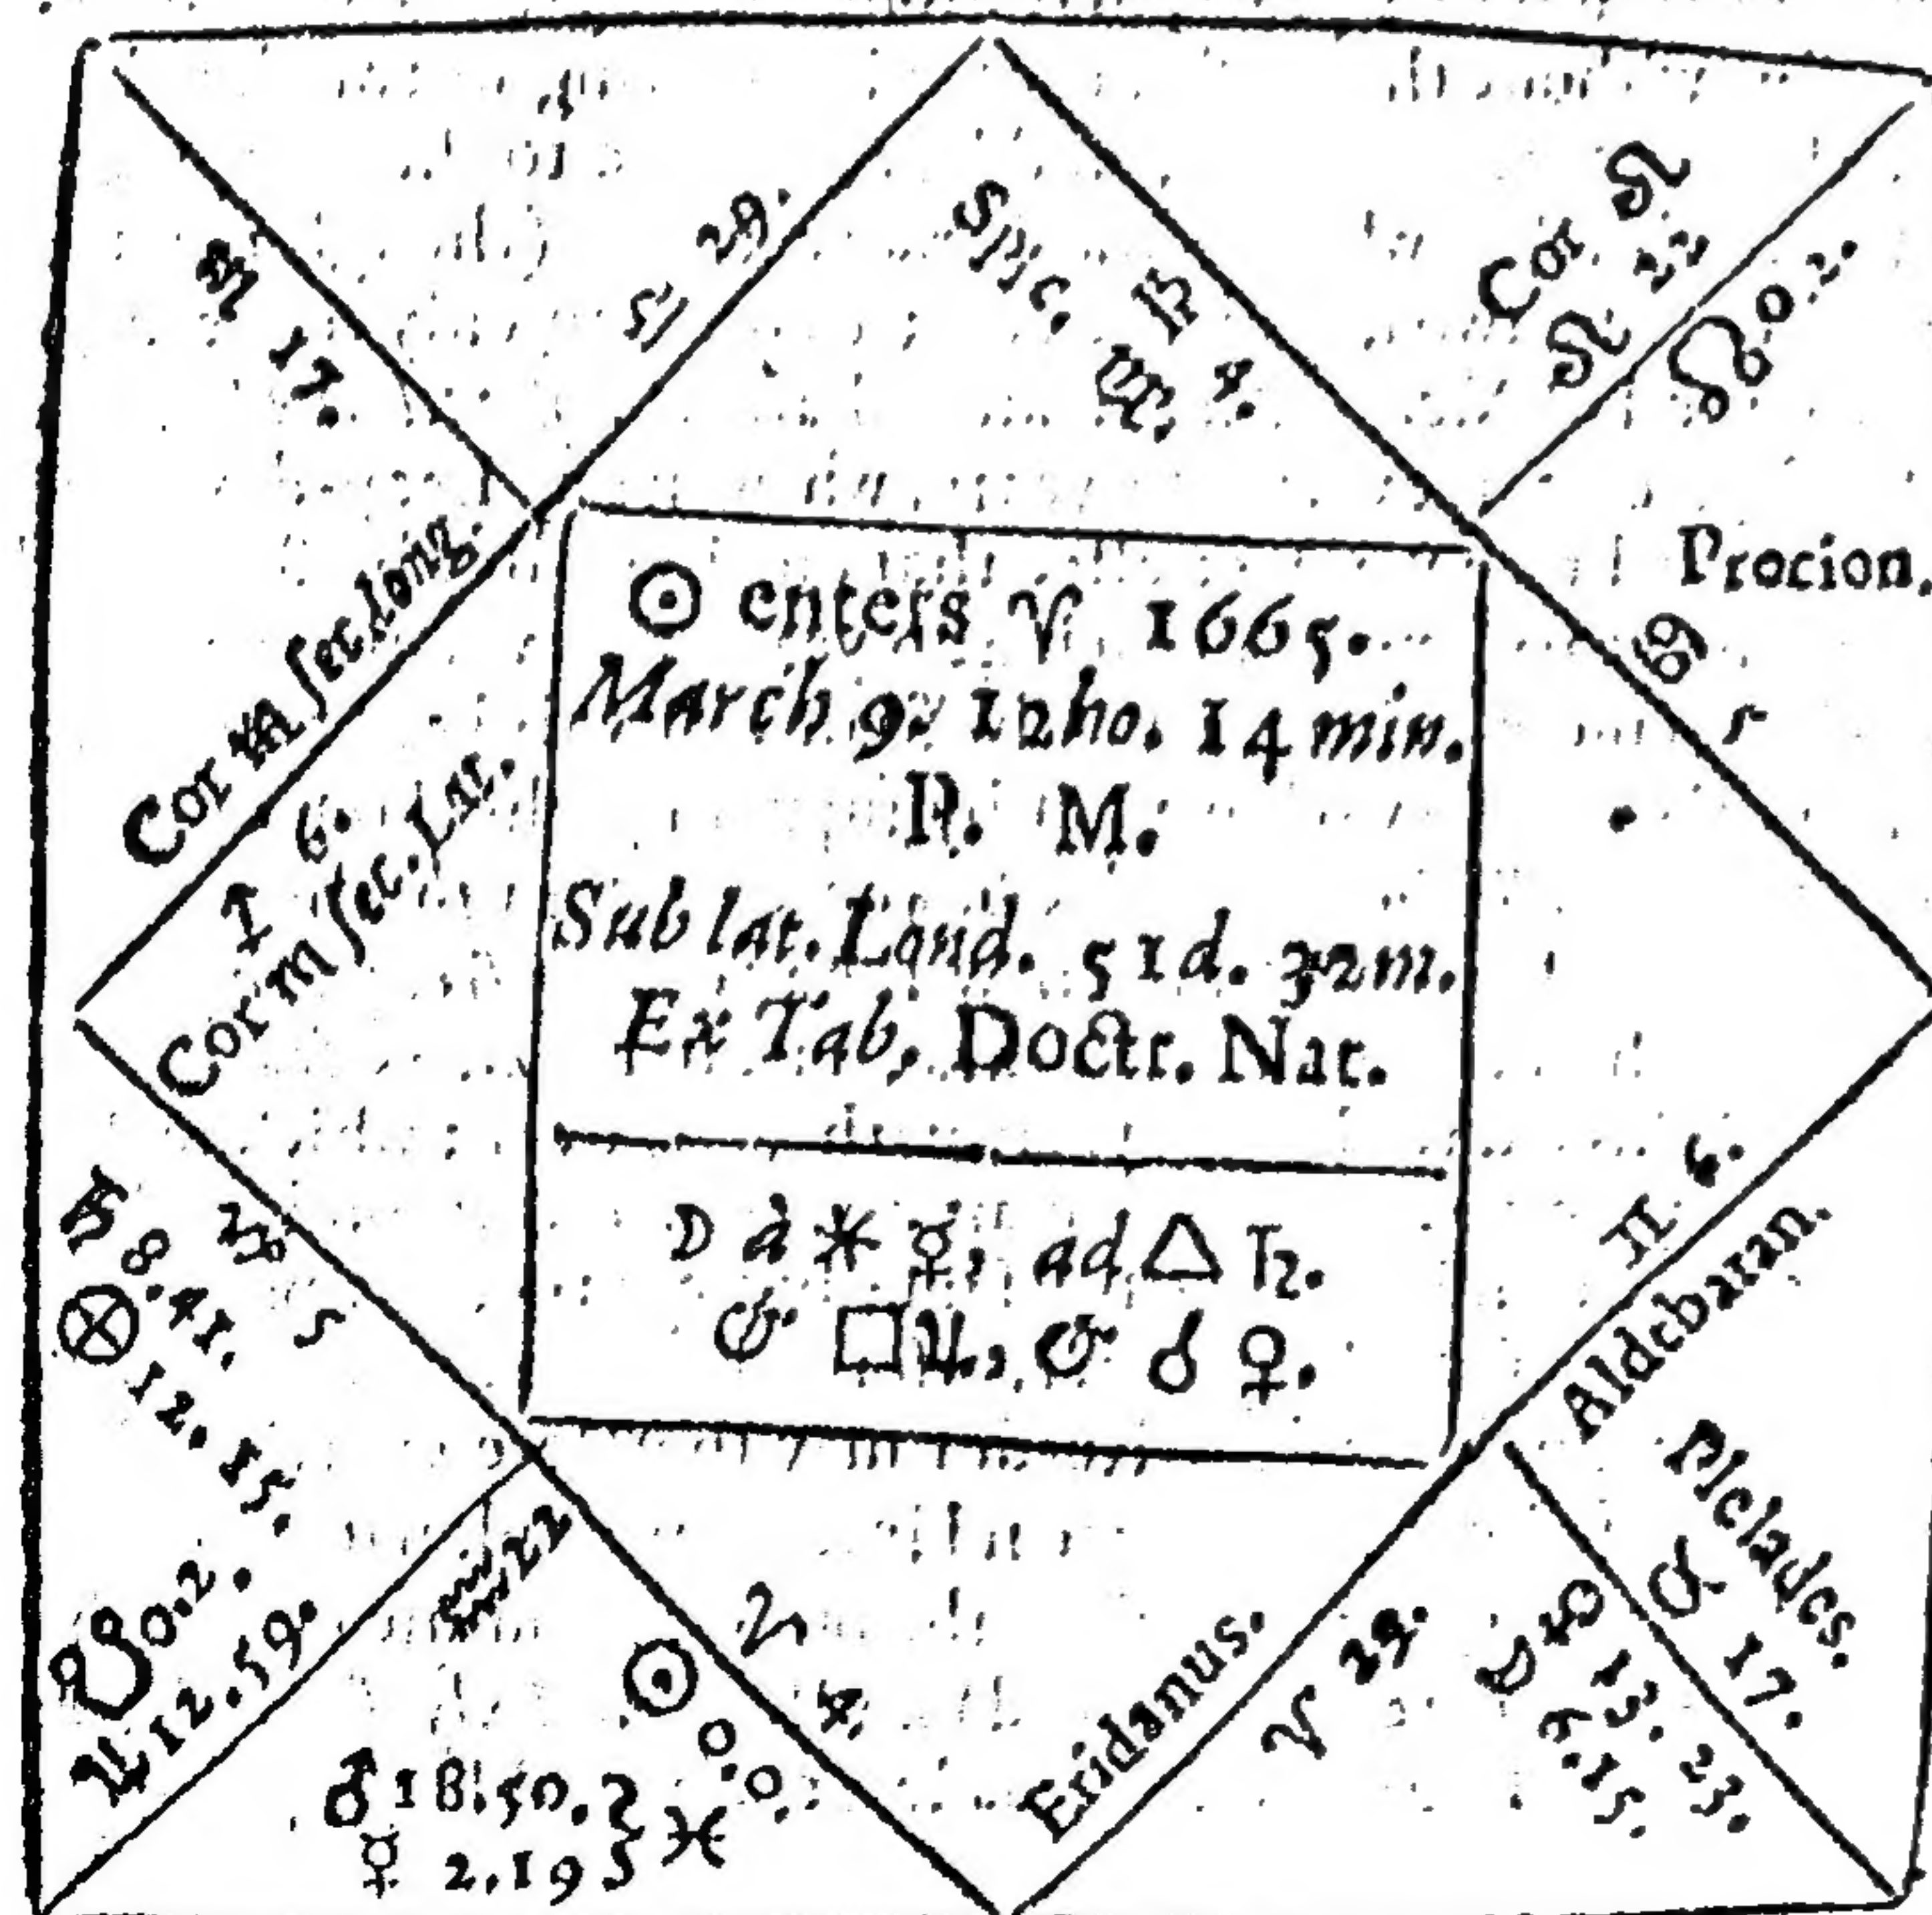

For the Sun's place.

Med. long. Solis	11 S. 27 d. 58 m. 27 sec.
Apog. Solis subtr.	3 6 36 16
Anomaly Solis	8 21 22 11
Prosthaphæresis	2 1 33
Ver. loc. Solis	0 0 0 0 in Aries.

Ascensio Recta Medii Cæli 183. 30.

Ascensio Obliqua Horoscopi 273. 30.

The Figure follows.

A brief Judgement of the Year 1665.

In my *Dies novissimus*, or *Dooms-day* not so near as dreaded, I have at large proved it impossible for any man to deduce Astrological Judgments from the Conjunction of the two superiour Planets ♄ and ♀; and that by several Arguments. 1. Because it is very rare or seldom that such celestial congresses are celebrated; and therefore the little experience of short-lived men can afford no foundation for such predictions. 2. Chronologie (which in these matters is most adjuvant to Astrologers) is uncertain; and therefore no sure ground for them, whereon to raise a Judgment upon what hath succeeded such Conjunctions past. 3. It is impossible to obtain the position of heaven, when such Conjunctions happen: and to pretend to give Judgment without a Figure, is as vain, as for a Pilot to guide a ship without his Compass. 4. Should we allow Chronologie certain, yet the Artist being a man, and subject to error, is very like to be caught with a *non-cause*, in stead of a true cause; & ascribe several matters to the ☿ of ♄ and ♀, which may in truth be the effects of Eclipses, or other less conjunctions, transits, vernal ingresses, &c.

If therefore (like some others) I do not stuff my sheets with such groundless and uncertain matter, to puzzle and confound the Readers, I hope they will both easily and readily excuse me: I conceive it not hard for any man to write Astrological Romances, that is but acquainted with the terms of Art: but I affect not jesting with serious things, nor yet to make loud noises of what is never likely to succeed, or to amuse the world with fictions and forgeries; thereby preventing others calling me lyer, and make my book perform that office daily to me, *gratis*.

Come we then to treat of what hath a verified and approved foundation, viz. the constitution of this present year 1665. and that from the Figure foregoing, calculared to the Merid. London.

♄, ♀, and ☿, will be sharers in governing this year, as having greatest strength in the Figure. Very probable it is therefore, that the men and things they respect, will enjoy much happiness, increase and augmentation. The condition of the common man will be good, notwithstanding the covetousness of ♄ is such, he will be always grumbling and repining. As ♄ is *Superiorum altissimus*, so he hath signification of the highest & most eminent of persons, as Emperors, Kings, Princes, Electors, Dukes, &c. but should I mention his signification in the second house, O! how it would grate the ears of a wilful, stubborn, and obstinate people!

Let

A brief Judgement of the Year.

Let us consider \odot then, the royallest of the Planets, to be the significator of Kings, &c. who in our Figure is placed upon the cusp of the fourth house, casting an \mathcal{S} to the angle of greatness, honour and dignity; but emits a gracious and friendly Δ to the Ascend. whispering (in the Stars dialect) this certain truth, *That Emperours, Kings, &c. will be more indulgent, loving, and kind unto their subjects, then careful of themselves, or covetous to advance their own interests; or indeed, then their subjects will be loyal and obedient to them.* Yet must I withal tell the commonalty, that their Kings, &c. will this year make a more serious inspection into their respective Coffers & Treasuries, their Customs, &c. and not suffer themselves to be so egregiously cheated as formerly.

That the year in general promises much good to the count y-man, and common people of all kindes, is very conspicuous; for \mathcal{H} lord of the second is very strong therein, and \mathcal{U} lord of the Ascend. is locally in the second also; portending much good and happiness, and increase of gain to emerge unto them from their several industries in their several ways of profession, and by several ways and means unexpected, viz. by publike employments that by some honoured Patriots of Religion and Learning will be begun, for the setting of many of the poorer sort on work. Landlords also will generally be more kinde and less cruel to their poorer tenants then formerly, thereby encouraging them to labour and industry. All which happie significations are augmented by \mathcal{D} and \mathcal{Q} their casting a friendly Δ , not onely to the second house, but unto the lord thereof, and \oplus there. Such happie Configurations seldom happen!

Grain of all kindes, and fruits, &c. will be plentiful; and England is like to be blest with a happie harvest: but I fear, unless Authority take great care to prevent it, we shall have the price thereof (of Corn especially) exceedingly enhanced, and that by the covetousness of some earthly hearted men, who will hoard it up; to the prinding of the faces of the needy; as also by too much transportation of the same into other countries: a seasonable anticipation whereof, will be of universal emolument to this Nation. For if it be true, that the strength of a Planet raiseth the price of the commodity it signifies (which all Astrologers agree in) then the strength of \mathcal{H} in this Vernal Figure, certainly presages that the price of Wheat, Rye, Barley, Malt, and all things growing on the earth, &c. will be considerably in-

creased.

A brief Judgement of the Year.

creased: Coles also, and other Minerals under \mathcal{H} , together with Wood and Timber, will bear a proportionable rate.

And it will not onely be thus in inland-commodities, and of our own growth; but in others, which we have the advantage of by the noble adventures of our worthy Merchants and Sea-men into forraign parts; as in Silks, Cloth, Sugar, Wine, Figs, Raisins, &c. \mathcal{Q} is their natural significatrix, and very potent in the fifth in \mathcal{S} of \mathcal{D} there. *Vis unita fortior*: their price will therefore rise.

And if some ignorant pretenders to this Science (who I finde are apt enough, either with cause or without, to carp and cavil at my writings; and yet, I suppose, were it not for many of my Works, those pitiful findfaults had scarcely ever known truly there had been such things in nature as 12 Signes & 7 Planets! yet if such, I say) shall desire to know a more immediate reason of this my Judgment; I tell them, that the Seas will be infested with many Pirates and Robbers, which will infinitely obstruct the Maritime trade, and consequently the transportation of such commodities as I last mentioned; and so their price will come to be raised. But, may some say, How shall we know this beforehand to be true, having nothing but your bare word for it? Well! be sure now, that you be but as exact and strict with others that write, and I will promise you, that I will not, either now, or at any other time, impose upon you in any thing, but will satisfy your curiosity. The \odot is lord of the ninth, the angle of Sea-voyages, &c. and he is in \square of \mathcal{H} lord of the second, from the second and fourth, in Cardinal and Tropical signes. And now you have my Reason: if you will cavil, you may.

Be therefore careful, all ye Merchants, how, and in what manner, at what time, with what manner of persons, and unto what place or places you deal this year! Consult (if it be possible) your own Nativities; your general significator (I assure you) is very weak: a little Astrologie (would you take pains in it) may prove more advantageous to you then your Ensurance-Office.

But because many matters are expected from my Pen, I transmit this discourse of our own Nation by it self; and come next to consider its condition in its relations, viz. Scotland, Ireland, &c.

That we shall be quiet, and live happily and friendly with each other, there is no question. But I fear me, (having good ground so to do) that Scotland will be subject to great sicknesses and mortalities; the death of many of their eminent men is seriously

A brief Judgement of the YEAR.

clously threatened: Colds, Pilsicks, Coughs, Consumptions, Inflammations, corruption of blood, Lasks, Fluxes, &c. will be very rife and frequent among them. And if I should adde a scarcity of provision, &c. I have a considerable warrant for it. For their Ascendent is now become Descendent on the Cusp of the house of death and mortality, viz. the eighth house; which *Ludovius de Rigis* saith, is the most cruel and malicious in all things, of the whole Zodiacal Circle, *Aphor. 35*. Besides, H (not only the enemy of Nature in general, but to them in particular) is in V , in J to their Ascendent; and so will continue neer three years together afflicting them. When he was in G in anno 1641, &c. we all remember the cruel mischiefs that nation underwent; which was very aptly predicted by my good friend Mr. *John Booker*, in his Almanack of that year; where in his *Januaries* Observations, he had a pithy piece of Poetry, which, because it suits so appositely with my present discourse, I shall (with a little variation) insert.

*Who dares deny that good or bad effects
Can be presaged from the grand Aspects
Of Stars and Planets? Let such view the Sun
Now squaring Saturn: The poor Scot's undone!
'Tis true, sometimes we miss, of what? where? when?
As others do: for we are all but men.*

Let us next consider how the heavens favour the state and condition of Ireland. The D being in J of Q , their natural significatrix, in their true and proper Ascendent S , in a friendly angle of heaven, viz. the fifth house; declares that nation to live happily, merrily, and free from all eminent troubles and vexations, this year: and both of them being in Δ of H (who is *dominus Anni*) shews the commonalty of that kingdom active and industrious, in managing and tilling their ground; of which there is very great hope, they will reap a pleasant and comfortable Crop. Many new edifices and buildings will be by them this year raised; perhaps a foundation unto some new Town or Towns, &c. possibly also some old ones bettered in their Charters, Corporations or Priviledges: And the honourable Governour, or Lord Lieutenant of that Nation, notwithstanding some petty murmurings and discontents, will for that reason live more happy, enjoying greater affection among, and more obedience from that people, then many his predecessors.

Now,

A brief Judgement of the YEAR.

Now from our neighbour-nations, I shall assume a little liberty (with favour) of flying further abroad. And this year being the eve (as it were) of that great and eminent year 1666, so notoriously talkt of by many foreign Astrologers, as well as by some (as little wise) among us, to carry such dreadful horror, and horrid significations in it! As, that the Empire of Germany must be destroyed by the Turks; and the ruine of Rome and the Papacie this year must also come; *cum multis aliis*: I shall (with or without the favour either of *Flaccianus*, *Nembarbus*, or *Ecarius*, or any other Enthusiastick Artists) touch these matters a little, & but little. And first I must acquaint the world, that Astrologie hath its hereticks as well as Religion; and many things are by many pretenders thereunto fastned upon the Stars, which the sober Astrologer would blush to own; as well knowing the pure and demonstrative rules of his Art do not in the least countenance or encourage them. If any man shall pretend to prove that year more prodigious, and to be laden with more Miracles and wonders then other years, I presume he will finde some more mighty and extraordinary celestial Phenomena therein, then other years afford; and if he cannot, he must acknowledge himself (or give us leave at least to esteem him) an Impostor. That there are not, will not be more eminent Configurations in that year, then in others, nay hardly so eminent, I assert; and that there should be more prodigious & monstrous actions happen therein, there is no reason for us to believe, nor any ground for any sort of persons to fear. It will no question be a year of a much milder countenance then many suppose, or (without sure ground) very liberally report. Nor will the Turks be so all-conquering as supposed: I rather conclude them subject to the unfortunate Poles late cruel fate. In my *Dooms-day* not so near as dreaded, &c. I have taken notice of the time (so neer as could be collected) of the Turks invading the Empire; and, by reason of the infortunacie thereof, have (after serious enquiry into the matter) predicted, that the Empire of Germany will be so far from being over-run and destroyed by the Turks, that the Turks themselves will be forced to retreat, or be driven back again, with eminent and considerable loss and damage.

I know very well, that the Emperor of Germany, at the time of his being invaded, had his *Med. Eali* directed *ad oppos. Solis*: And I also know, that that direction is now over; and that the Grand Seignor hath now his *M.C.* directed *ad corp. Martis*, and this in *Scorpio*, a fixed and violent Signe. And Saturn also is coming upon his Horoscope, and upon the radical places of both the Luminaries, there to continue neer three years together. Which considered, I shall not (I suppose) disparage Astrologie, if I again predict the retrogradation and ruine of that great Potentate in this his undertaking against the Emperour, any more, then when (at far greater odds) I foretold the death and destruction of the King of Sweden in 1658, when he was in his greatest glory; having not only invaded the King of Denmark's territories, but then blocked up that great Prince in his chief citie *Copenhagen*. This year it self, as to the German Empire, will tell the world, that the next, viz. 1666, there will be no such wonders perpetrated, as are idly bruited abroad concerning the same. The Emperour and the Electoral Princes will unite, and boldly acquit them of their enemies: nor will the house of Austria suffer that perdition, &c. that some imagine, and groundlessly threaten.

And

A brief Judgement of the Y. N. A. R.

And whatever any (under pretence of Astrologie) have wrote, of the ruine & destruction of Rome, to happen either in, or by the ensuing year 1666; I am so far from shaking hands with, that I utterly disown, and protest against the same: chiefly, that flying report, that I should add any thing in my writings toward the support of such rash and groundless assertions. True it is, in my *Collett. Genit.* p. 75, I printed the Nativity of Alexander 7. the present Pope; and did therein predict unto him much misfortune to happen in his grand Climacterical year: which how well it was verified, in the difference he had with the valiant and active French King, anno 1663, & 1664, I need not report, since it is yet fresh in every mans memory. And upon the direction of his Sun *ad oppos. Saturni*, cum *6. sine latit.* I well remember that I inculcated a possibility of that great and eminent Churchmans death. That he was dangerously ill, an. 1664, the *Gazets* or News-books by several Letters informed us. And if he do live unto the middle of this year 1665, my prediction is not much to be blamed: but if he shall pass the whole year free from the Stone, Consumption, Lethargie and Apoplexie, (all of which he should be strongly accosted with; and I am apt (yet) to believe, even unto death) I shall then say, my judgement in Art hath failed me: and the effects of directions are otherwise to be studied and considered, then at present they are by the ablest Astrologers in the world.

Howbeit, I utterly deny that ever I predicted (or ever intended by my publishing this illustrious persons Geniture, to predict) the downfall of the Papacie, or the destruction of Rome! (Astrologie hath not attained yet unto such perfection; and (with favour of the learned *Gauricus*) I suppose neither the radix of that great citie, nor the original of that religion, is known unto Astrologers.) Nor is it a good or natural consequence, for any man to urge, That because I predict the death of the Pope, I must therefore presage the destruction of the Popedom! I disdain such fanatick and Quaker-like conclusions, as having no more sap or marrow in them, then if one should infer, from the death of a Governor of a town, or master of a house, the infallible and certain ruine of the places over which they commanded.

And so (being confined to this scantling) I conclude. And now Reader, I hope thou wilt excuse me that I have kept to my theme. I have not (I confesse) wandred, as wanting matters, or told what the Prince of Transylvania hath done, or is doing; or given a narrative of *Abassis* direct & retrograde proceedings; of the designs of the *Persians*, or the victories of the *Muscovites*; how Count *Serini* hath behaved himself against the Turk; how every Empire, Kingdom or State is either offending or assisting each other; how the *Dutch* affront all Nations; or when the *Spaniards* crack'd his beate. These things, and more, I have purposely omitted; as knowing Astrologie and History to be two distinct things. Let *Merlins* and *Mercuries* do what they please; whatever they have, I have no warrant for such matters; and I am sure Astrologie affords none.

The Art of Astrologie, in all its Parts, is taught by
From my House in Jewen-Garden,
against the Sun in Jewen-Street.

JOHN GADBURT.
